

OPTICAL SORTING MACHINES
FOR GLASS RECYCLING

HIGHLIGHTS:

- Flint glass sorting based on chemical composition
- Smart sorting intelligence based on colour, shape and transparency
- Statistical evaluations and analysis of input and output material

Glass recycling's most versatile sorting machine

APPLICATION

SORTING OF:

FLINT GLASS

GREEN GLASS

AMBER GLASS

DARK GLASS

SEMI COLORS

FLINT GLASS IN DESIRED QUALITY

RECOGNITION OF CHEMICAL COMPOSITIONS IN FLINT GLASS:

With REDWAVE CX sorting machines various qualities of flint glass can be recovered based on their chemical compositions.

HIGH SENSITIVITY

Passing material / Ejection

MEDIUM SENSITIVITY

Passing material / Ejection

LOW SENSITIVITY

Passing material / Ejection

REJECT OF:

CSP*

*CSP = Ceramics, Stone & Porcelain

GLASS CERAMICS

METALS

DARK GLASS

PLASTICS

LEAD GLASS

Recognition with REDWAVE XRF

REDWAVE CX ADVANTAGES

- Superior material recognition (e.g. dark glass, glass ceramics)
- Cost-saving separation of impurities with only one sorting machine (e.g. separation of glass ceramics together with CSP and metal)
- Programming dexterity allows one machine to be assigned various sorting tasks lowering costs and saving energy (e.g. different cullet sizes or different colours).

MOST ADVANCED FLINT GLASS SORTING

- INCREASE OF QUALITY AND PROFIT**
With REDWAVE CX, different qualities of flint glass can be produced. This makes it possible to produce the highest flint glass quality and customised combination, which in turn increases the use of cullet, and offers a valuable contribution to the cycle
- EXPANSION OF THE CUSTOMER PORTFOLIO**
Different qualities of flint glass opens up new possibilities for glass processors.

DARK GLASS RECOGNITION

- PRODUCTIVITY RATES**
Glass loss in plants is reduced, and the recovery of marketable glass product is expanded, leading to an increase in plant productivity rates.
- UPGRADE**
A retrofit kit is available to existing REDWAVE CX users supporting a system upgrade to improved technology at low cost.
- GLASS RECOVERY**
Establishing a stand-alone downstream stage for the recovery of dark glass pieces from the CSP waste of existing plants.

OPERATIONAL PRINCIPLE

- Vibratory feeder
- Glass slide
- Camera unit
- LED light source
- Valve and nozzle installed at the front
- Valve and nozzle installed at the back
- A Ejection A (front)
- B Ejection B (back)
- C Pass (negative sort)
